

Creating a link to a website or file within a PowerPoint slide: 3 Options & Examples

Following are 3 examples of different ways to create a link to a website from a slide. The same procedure is used to link to another file (such as a Word doc, another PowerPoint show, a video file, or other file types).

Note: The link will only work when in “slideshow mode” (not while editing).

- 1. Link to site from a picture: Inserted picture, right mouse-clicked on picture and selected hyperlink, and entered URL / address.

- 2. Link from text: Inserted text, right mouse-clicked on picture and selected hyperlink, and entered URL / address.
 - [Click here to visit Holy Family’s Website](#)
- 3. Link from an address: Typed or pasted URL, right mouse-clicked on picture and selected hyperlink, and entered URL / address.
 - <http://www.holyfamily.edu>
